

New Product:

This dual language (English & Spanish) activity book is designed to provide "hands-on" engagement with geoboards, so that while students are constructing, they are working on the geometric concepts of transformation.

The pages are made of unique, durable material so that the cover and pages rotate on a fixed point, and can hold-up under repeated use. The pages in the book define congruency, symmetry, translations, reflections, and rotations with accompanying graphic representations of polygon's movements on a plane.

Ideal for work stations.
Geometry, Grades 4-6

#MM415
SRP: \$9.99
